

# Shielded Communication Cable

This shielded communication cable ensures signal transmission in electronic communication systems. Its design incorporates foil shielding and multiple insulated wires to provide protection against electromagnetic interference.

## Product Overview

### High-Performance Shielded Communication Cable

This shielded communication cable is engineered for reliable signal transmission in electronic communication systems. It features multiple internal conductors protected by foil shielding to ensure high-quality data integrity by minimizing electromagnetic interference. The durable gray outer jacket provides robust protection for the insulated internal wiring, making it suitable for professional electronic installations.

## Technical Design

### Cable Construction

- Multiple internal conductors
- Foil shielding for EMI protection
- Insulated wires (including blue and brown)
- Durable gray outer jacket

### Shielding Type

Foil Shielded • Anti-Interference

## Application

Primary Application	Signal transmission in electronic communication systems
Key Features	Signal Integrity, EMI Protection, Multi-Conductor, Communication Grade
