

Shielded Twisted Pair Data Cable

This data cable features twisted pair conductors for reliable signal transmission. Shielding minimizes electromagnetic interference, and a durable jacket provides protection.

Product Overview

High-Performance Data Transmission

This shielded twisted pair data cable is engineered for reliable signal transmission in demanding networking environments. By utilizing advanced shielding techniques, it effectively minimizes electromagnetic interference to ensure superior data integrity. The rugged outer jacket provides essential protection against physical wear and environmental factors, making it an ideal choice for structured cabling systems and high-bandwidth data center applications.

Technical Specifications

Key Features

- Electromagnetic interference shielding
- High bandwidth support
- Low signal loss design
- Durable protective outer jacket

Cable Type	Shielded Twisted Pair
Primary Applications	Networking, Structured Cabling, Data Centers
