

Shielded Twisted Pair Ethernet Cable

This shielded twisted pair cable is designed for high-speed data transmission in network environments. It features individually twisted wire pairs to minimize interference and includes outer shielding for additional protection against electromagnetic interference (EMI).

Product Overview

High-Performance Shielded Connectivity

This Shielded Twisted Pair (STP) Ethernet cable is engineered for high-speed data transmission in demanding network environments. Featuring individually twisted wire pairs, it effectively minimizes interference and crosstalk to maintain signal integrity. The robust outer shielding offers superior protection against electromagnetic interference (EMI), making it an ideal choice for reliable data communication applications.

Technical Specifications

Installation Features

- Color-coded wires for easy termination
- Suitable for Ethernet networks
- Designed for high-speed data transmission

Cable Type	Shielded Twisted Pair (STP)
Interference Protection	EMI Shielding, Crosstalk Reduction, Twisted Pair Design
