

Shielded Twisted Pair Ethernet Cable

This is a shielded twisted pair (STP) Ethernet cable designed for networking applications. It features a metallic shield that protects against electromagnetic interference (EMI).

Product Overview

High-Performance Networking Solution

This shielded twisted pair (STP) Ethernet cable is engineered for reliable data transmission in demanding networking environments. Featuring a robust green outer jacket and high-quality internal wiring, it ensures signal integrity by minimizing electromagnetic interference. Designed with color-coded insulation for easy identification, this cable is an essential component for stable and secure network infrastructure.

Technical Specifications

Shielding

Metallic Shield • EMI Protection

Construction

- Color-coded internal twisted pairs
- Durable outer jacket
- Metallic shielding layer

Cable Type	Shielded Twisted Pair (STP)
