

Shielded Twisted Pair Industrial Cable

High-performance shielded twisted pair cable designed for demanding industrial applications. It features robust construction with a metallic shield to minimize electromagnetic interference and ensure reliable data transmission.

Product Overview

High-Performance Industrial Connectivity

This shielded twisted pair cable is engineered specifically for demanding industrial environments where signal integrity is paramount. Its robust construction features a metallic shield designed to minimize electromagnetic interference, ensuring reliable data transmission even in harsh conditions. With color-coded insulation for efficient identification and termination, this cable is an ideal solution for networking, automation, and complex control systems.

Technical Specifications

Shielding

Metallic Shielding • EMI Protection

Key Applications

- Industrial Networking
- Automation Systems
- Control Systems

Cable Type

Shielded Twisted Pair (STP)

Design Features

Twisted Pair, Color-coded Insulation, Interference Resistant
