

# Short Jaw Metal Clamp

This short jaw clamp is designed for gripping and holding objects in tight spaces. It features a serrated jaw for enhanced grip and a spring-loaded mechanism for easy operation.

## Product Overview

### Professional Tension Testing Clamp

The Short Jaw Metal Clamp is a specialized tool engineered specifically for assisting in precision tension testing applications. Featuring a durable metal construction, it provides a reliable and secure grip even in tight, confined spaces. The design incorporates a serrated jaw for improved surface contact and a spring-loaded mechanism to facilitate efficient, repetitive operation.

## Technical Details

Jaw Design	Serrated
Operational Mechanism	Spring-loaded

## Material and Finish

Construction Material	Durable Metal
Surface Coating	Corrosion-resistant

## Application

Primary Application	Tension Testing, Material Gripping, Laboratory Testing
