

Signal Demodulation and Modulation Module

Module is designed for signal demodulation and modulation. It is suitable for use in electronic devices requiring data transmission capabilities.

Product Overview

High-Performance Signal Processing

This collection of signal demodulation and modulation modules is engineered for robust data transmission in complex electronic communication systems. Featuring a compact, shielded design, these units ensure reliable signal integrity and offer multiple input/output ports for versatile integration. They are specifically designed for demanding applications requiring precise data handling and consistent connectivity performance.

Technical Specifications

Available Models

- MBM-13
- MBM-01
- MBM-07
- MBM-15

Production Batch Codes

2005061401, 2005060101, 2005060521, 2005060106

Design Features

Design Type

Shielded • Compact • Multi-port

Primary Application

Electronic communication systems requiring data transmission
