

Silicone Rubber Keypad

These keypads feature a flexible silicone construction, providing durability and tactile feedback. They are suitable for use in remote controls, industrial control panels, medical devices, and other electronic equipment where a robust and reliable input solution is needed.

Product Overview

High-Performance Silicone Keypads

These silicone rubber keypads are engineered for versatility and durability in diverse industrial and consumer applications. Featuring a flexible construction, they provide excellent tactile feedback while remaining resistant to dust, water, and harsh chemicals. They serve as reliable user interface solutions for everything from medical devices and industrial control panels to standard remote controls.

Technical Specifications

Material	Silicone Rubber
Features	Dust Resistant, Water Resistant, Chemical Resistant, Flexible, Tactile Feedback

Application Suitability

Industries

- Remote Controls
- Industrial Control Panels
- Medical Devices
- Electronic Equipment
