Overview

Professional Wood Jointing Performance

The Single Cutter Wood Jointing Machine is a precision-engineered tool designed to create perfectly flat, square edges on lumber. Its robust construction ensures stability during operation, while the high-speed cutter head delivers efficient material removal for a clean, professional finish. Designed for both woodworking shops and serious hobbyists, this machine provides the reliable performance and durability required for demanding jointing tasks.

Technical Specifications

Cutter Configuration	Single-cutter high-speed head
Control Mechanism	Lever-operated
Fence System	Yes
Key Capabilities	Precision Jointing, Flat Edge Creation, Angle Control, Depth Control

Construction

Material Composition

- Robust blue base
- Silver-colored aluminum table
- Interlocking wooden components
