

Single-Cylinder 4-Stroke Engine for Push Mowers

This single-cylinder, 4-stroke engine is designed for push mowers. It features a recoil starter and an overhead valve (OHV) design for improved efficiency.

Product Overview

High-Efficiency 300 Series Engine

This single-cylinder, 4-stroke engine is specifically engineered for push mower applications, offering a balance of compact design and robust performance. Featuring an overhead valve (OHV) configuration, it delivers improved fuel efficiency and reliable power output for demanding lawn care environments. Its straightforward construction ensures seamless integration into various mower chassis designs.

Technical Specifications

Engine Type	Single-cylinder, 4-stroke
Valve Design	Overhead Valve (OHV)
Starter Type	Recoil Starter

Design Features

Key Features	Compact, Durable, High Efficiency
--------------	-----------------------------------

Application

Intended Use	Push Mowers
