

# Single-Cylinder Air-Cooled Auto Engine

This is a single-cylinder, air-cooled engine. It features a carburetor fuel system, overhead valve (OHV) configuration, and a horizontally split crankcase.

## Overview

### High-Performance Single-Cylinder Engine

This single-cylinder, air-cooled engine is designed for reliable and efficient operation. Featuring an overhead valve (OHV) configuration and a horizontally split crankcase, it offers robust performance for various applications. The cast aluminum construction, combined with integrated cooling fins, ensures effective heat dissipation even during extended use.

## Technical Specifications

Cooling System	Air-cooled
Cylinder Configuration	Single-cylinder
Valve Train	Overhead Valve (OHV)
Fuel System	Carburetor
Crankcase Design	Horizontally split

## Construction & Materials

Material Composition	Cast Aluminum Cylinder Head, Cast Aluminum Block
Thermal Management	Yes

## Starting System

Starter Type	Electric starter motor
