

Single-Cylinder Air-Cooled Diesel Engine

This single-cylinder diesel engine is air-cooled and features a 4-stroke horizontal design. It is suitable for applications needing reliable power, such as generators, water pumps, and agricultural machinery.

Product Overview

Reliable Power Solution

This single-cylinder, air-cooled 4-stroke diesel engine is designed for consistent performance in demanding environments. Featuring a horizontal configuration and direct injection technology, it ensures efficient combustion and long-lasting durability. It serves as a versatile power source for generators, water pumps, agricultural machinery, and small construction equipment.

Technical Specifications

Model	170F
Engine Type	Single-cylinder, 4-stroke, air-cooled, horizontal

Performance Metrics

Performance Highlights

2.6 kW

Rated Output

3000 r/min

Rated Speed

Application Suitability

Suitable Applications

- Generators
- Water pumps
- Agricultural machinery
- Small construction equipment

Features

Key Features	Air-cooled, Direct injection, 4-stroke, Horizontal configuration
