

Single-Cylinder Air-Cooled Engine (125cc-150cc)

This single-cylinder, air-cooled engine is designed for various machinery applications. With a displacement of 125cc to 150cc, it delivers reliable power for light to medium-duty tasks.

Overview

Robust Power Solution

This single-cylinder, air-cooled engine is designed as a reliable power source for various machinery applications. Engineered for fuel efficiency and durability, its compact design ensures seamless integration into diverse equipment types. Built with precision machining and high-quality materials, it is optimized to perform consistently in demanding environments.

Technical Specifications

Displacement

125 cc
Minimum

150 cc
Maximum

Cooling System	Air-cooled
Fuel System	Carburetor
Configuration	Single-cylinder

Applications

Typical Applications	Motorcycles, Generators, Water Pumps, Small Machinery
----------------------	---
