

Single-Cylinder Air-Cooled Engine

This is a four-stroke internal combustion engine commonly used in motorcycles and small vehicles. The engine features a single-cylinder design with prominent cooling fins for air-cooling.

Overview

High-Performance Single-Cylinder Engine

This four-stroke internal combustion engine is engineered for reliability and efficient performance in small vehicles and motorcycles. Featuring a robust air-cooled design with prominent cooling fins, it ensures optimal thermal management during operation. The unit comes as a complete, ready-to-install assembly, including essential components like the carburetor and electrical wiring.

Technical Specifications

Cooling System

Air-Cooled

Included Components

- Carburetor
- Electrical wiring
- Engine casing

Engine Type

Four-stroke, Single-cylinder

Assembly Status

Complete assembly
