

Single-Cylinder Air-Cooled Gasoline Engine

This is a single-cylinder, air-cooled gasoline engine suitable for various machinery. It features a recoil starter and a fuel tank mounted on top.

Overview

High-Performance Single-Cylinder Engine

This versatile, single-cylinder air-cooled gasoline engine is designed for reliable power delivery across a wide range of industrial and commercial applications. Its robust architecture and recoil starter system make it an ideal choice for powering essential equipment like generators, water pumps, and heavy-duty construction machinery. Engineered for efficiency and ease of operation, this engine provides a consistent power source for demanding work environments.

Technical Details

Engine Configuration	Single-Cylinder, Air-Cooled
Fuel Type	Gasoline
Starter System	Recoil Starter

Applications

Suitable Applications

- Generators
- Water pumps
- Construction machinery

Certifications & Features

Key Features	Air-Cooled, Single-Cylinder, Recoil Start, Top-Mounted Fuel Tank
