

Single-Cylinder Diesel Engine 4.41kW

This air-cooled, horizontal single-cylinder diesel engine delivers 4.41kW of rated output. It is engineered for industrial and agricultural applications, providing reliable power for various machinery.

Overview

Industrial Diesel Power

This single-cylinder diesel engine is designed for reliability in demanding industrial and agricultural environments. With a power output of 4.41kW, it provides consistent performance for machinery such as generators, water pumps, and small tractors. Its robust construction ensures efficient operation, while the versatile cooling system allows for effective heat management under varied workloads.
