

Single-Cylinder Four-Stroke Air-Cooled Engine

This is a single-cylinder, four-stroke engine with air cooling and a carburetor fuel system. It is designed for small vehicles and machinery, featuring electric start and cooling fins for heat dissipation.

Overview

Compact and Reliable Power

This single-cylinder, four-stroke engine is engineered for versatility in small vehicles and machinery. Featuring efficient air cooling and a robust metallic finish, it is designed for consistent performance in demanding environments. The unit includes an electric start system and specialized cooling fins to ensure optimal heat dissipation during operation.

Technical Specifications

Starting Method

Electric Start

Engine Displacement

124 cm³

Engine Configuration

Single-Cylinder, Four-Stroke, Air-Cooled

Fuel System

Carburetor
