

Single Drum Road Roller

This single drum road roller is used for compacting soil, gravel, concrete, or asphalt. It is suitable for various compaction tasks in road construction and civil engineering projects.

Product Overview

Professional Compaction Performance

The SR04D-5 is a fifth-generation single drum road roller engineered specifically for high-quality treatment of top surface areas. Designed as a versatile workhorse, it provides reliable compaction for roads, pavements, and foundations. The unit features an integrated water cooling system over the barrels to maintain performance during continuous operation.

Technical Specifications

Cooling Mechanism	Water cooling element over barrels
Design Generation	5th Generation

Applications

Suitable Applications

- Road surface compaction
- Pavement treatment
- Soil compaction
- Gravel foundations
- Concrete leveling
- Asphalt finishing
