

Single Drum Vibratory Road Roller

This road roller is designed for soil compaction and asphalt paving. It features a large steel drum for effective compaction, a powerful engine, and a comfortable operator cabin.

Overview

High-Performance Compaction Technology

This single drum vibratory road roller is engineered for demanding soil compaction and asphalt paving tasks. It combines a robust steel drum with a powerful engine to deliver consistent, reliable performance on various construction sites. Designed with operator comfort and maneuverability in mind, it features an articulated steering system and advanced hydraulic drive to maximize productivity in road construction and maintenance projects.

Key Features

Operational Capabilities

- Hydraulic drive system
- Advanced vibration system
- Articulated steering for high maneuverability
- Heavy-duty steel compaction drum

Applications

Road Construction, Soil Compaction, Asphalt Paving, Maintenance, Repair Projects
