

Single Drum Vibratory Roller

This is a mechanical drive single drum vibratory roller designed for compaction applications. It features a smooth drum for optimal compaction.

Overview

High-Performance Compaction

The mechanical drive single drum vibratory roller is engineered for demanding compaction applications, featuring robust construction and a powerful engine for consistent, efficient performance. Equipped with a smooth drum, it is optimized for a wide range of soil types, making it an ideal choice for road construction and site preparation. Operators benefit from an ergonomic cabin design and intuitive controls, ensuring reliable operation and excellent maneuverability on the job site.
