

Single Drum Walk Behind Roller

This single drum walk behind roller is designed for soil and asphalt compaction in confined areas. Its compact design allows maneuverability in tight spaces and includes a water tank for dust suppression.

Product Overview

Versatile Compaction Solution

This single drum walk-behind roller is engineered for precision compaction of soil and asphalt in confined spaces. Its compact form factor makes it an ideal choice for narrow sidewalks, utility trenches, and small-scale road maintenance tasks. Equipped with a reliable gasoline engine and integrated dust suppression system, it delivers consistent results while maintaining site cleanliness.

Design and Application

Suitable Applications

Soil Compaction, Asphalt Compaction, Road Maintenance, Trench Work, Sidewalk Construction

Key Features

Standard Equipment

- Robust gasoline-powered engine
- Integrated water tank for dust suppression
- Compact design for high maneuverability
- Asphalt adhesion prevention system
