

Single-Head Aseptic Filling Machine

This aseptic filling machine is designed for single-head filling applications, ensuring product sterility. Its stainless steel build guarantees hygienic operation and easy maintenance with a CIP system.

Product Overview

Aseptic Filling Precision

The Labopak aseptic filler is engineered for high-performance filling applications, specifically tailored for niche and organic food products. It utilizes steam as the primary sterilizing agent for both the machine and caps to ensure absolute sterility and zero contamination. The unit features a compact design, high levels of process automation, and a robust stainless steel construction for hygienic operations.

Technical Specifications

Number of Heads	1
Sterilization	Steam-based, Cap Sterilization, Machine Sterilization

Features & Control

Automation	Yes
Interface Type	Touchscreen
Cleaning Method	CIP (Clean-In-Place)

Safety & Construction

Integrated Safety

- Emergency stop buttons
- Interlocks

Main Material	Stainless Steel
