

Single Jersey Circular Knitting Machine

This machine is designed for weaving a variety of single-side cloths, including float design, scale, and PK cloths. It is suited for producing high-quality single-side weaves.

Product Overview

High-Precision Single Jersey Production

This high-speed circular knitting machine is engineered for the reliable production of premium single jersey fabrics. It utilizes an advanced rotating needle cylinder and a precision cam system to ensure consistent, high-quality loop formation across various yarn types. Designed for continuous industrial performance, the machine balances high output efficiency with robust construction for minimal maintenance requirements.

Technical Specifications

Core Components

- Rotating needle cylinder
- Advanced cam control system
- Multiple yarn feed system
- Integrated protective enclosure
- Emergency stop safety mechanisms

Adjustable Operational Parameters

Variable machine speed, Adjustable stitch length, Fabric density control

Safety and Maintenance

Compliance and Safety

Protective enclosure • Emergency stop • Continuous operation design
