

# Single Output LNB Satellite Receiver

This single-output LNB converts signals from satellite dishes for transmission via coaxial cable. It is designed for satellite TV systems to convert Ku band signals to lower frequencies.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Satellite Reception

This single-output Low Noise Block downconverter (LNB) is engineered for reliable satellite signal reception. It effectively captures Ku-band signals from the satellite dish and converts them into a lower intermediate frequency, minimizing signal loss during transmission via coaxial cable. Designed for durability and clear signal quality, this unit is an essential component for high-definition satellite television systems.

## Technical Specifications

### Supported Resolution

Full HD 1080

### Output Configuration

Single Output

### Connection Interface

Standard F-connector

### Primary Application

Satellite TV, Ku-band reception, Outdoor use

## Key Features

### Performance Highlights

**1080 p**
