

Single Phase Electronic Prepaid Watt-hour Meter

This single-phase watt-hour electronic prepaid meter uses microelectronics technology and SMT production. The meter's performance index complies with the GB/T 18460.3-2001 standard.

Product Overview

Advanced Prepaid Metering Solution

The DDSY188 F series is a high-precision single-phase electronic watt-hour meter designed for efficient energy management. Utilizing advanced microelectronics technology and SMT manufacturing processes, it ensures reliable performance and accurate measurement. This prepaid system is built to comply with rigorous industry standards, making it an ideal choice for modern electrical infrastructure.

Technical Specifications

Rated Voltage	220 V
Rated Frequency	50 Hz
Current Rating	5(20)A
Pulse Rate	3200 imp/kWh

Compliance & Standards

Standards Compliance
GB/T 18460.3-2001

Features

Core Features

- Prepaid CPU card system
- Digital energy usage display
- Remote monitoring via pulse output
- Advanced SMT production process

Display Highlights

0 kWh
Current Reading
