

Single-Phase Electronic Prepaid Watt-Hour Meter

This single-phase electronic watt-hour meter utilizes microelectronics technology and SMT production processes. Its performance index complies with the GB/T 18460.3-2001 standard.

Product Overview

Advanced Prepaid Metering

The DDSY188 F series is a high-precision single-phase electronic watt-hour meter designed for efficient prepaid energy management. Utilizing advanced microelectronics technology and modern SMT production processes, this device ensures reliable performance and accurate measurement. It is fully compliant with the GB/T 18460.3-2001 standard, making it a dependable choice for 220V, 50Hz power systems.

Technical Specifications

Current Rating

5 A

Base Current

30 A

Max Current

Rated Voltage	220 V
Rated Frequency	50 Hz
Pulse Constant	3200 imp/kWh

Compliance & Standards

Standards Compliance	GB/T 18460.3-2001
----------------------	-------------------

Features

Key Features

- Single-phase electronic measurement
- Prepaid CPU card functionality
- Advanced SMT production technology
- High-precision microelectronics
