

Single-Phase Induction Motor

This is a single-phase induction motor with a compact design, featuring a copper winding and stator within a metal housing. It is suitable for applications requiring low starting torque.

Product Overview

High-Efficiency Single-Phase Induction Motor

This single-phase induction motor offers a wide power range and reliable operation for diverse industrial and domestic applications. Designed for low-noise performance, it is ideal for light load starting scenarios. The product is built to high quality standards and is available with multiple international safety certifications.

Technical Details

Certifications	UL, VDE, TUV, 3C
Customization	Yes

Applications

Common Applications

- Washing machines
- Coolers
- Heater stoves
- Ovens
- Heaters
- Exhaust fans
- Air conditioners
- Microwave ovens
- Medical equipment
