

# Single Phase Two-Wire Energy Meter

This single-phase two-wire electronic energy meter measures active energy consumption. It operates at 240V, features a 5(80)A current rating and 50-60Hz frequency, and complies with IEC61036 standards.

## Product Overview

### Precision Energy Monitoring

This single-phase two-wire electronic energy meter is engineered for precise active energy measurement in both residential and commercial environments. It features a robust design compatible with standard 240V power systems and a wide current range suitable for various electrical loads. Its DIN rail mounting design ensures straightforward installation into existing distribution boards or control cabinets.

## Technical Specifications

### Current Rating

**5 A**

Base Current

**80 A**

Maximum Current

Operating Voltage	240 V
Frequency	60 Hz
Mounting Method	DIN Rail

## Compliance and Standards

Industry Certifications	IEC61036, CE
