Product Overview

High-Efficiency Surface Preparation

This Single Row Diamond Grinding Wheel is engineered for aggressive material removal and precise surface preparation. Featuring high-quality diamond segments brazed to a durable steel core, it is optimized for demanding tasks on concrete, stone, marble, and granite. The segmented design includes strategic cooling holes that enhance airflow, reduce heat buildup, and facilitate dust extraction for consistent, long-lasting performance.

Technical Specifications

Manufacturing Techniques

- Cold press
- Hot press
- High-frequency welding

Design Features

Single Row Segments • Cooling Holes • Dust Extraction • Durable Steel Core

Compatible Materials

Concrete, Stone, Marble, Granite, Masonry

Application & Usage

Primary Applications

- Surface preparation
- Coating removal
- General grinding
- Aggressive material removal

Compatible Equipment

Angle Grinders, Floor Grinders
