

Single-Stage Centrifugal Water Pump

This single-stage centrifugal water pump is designed for various applications. It features a robust construction with a cast iron pump body and a stainless steel impeller.

Product Overview

Professional Centrifugal Solution

This single-stage centrifugal water pump is engineered for versatile fluid transfer across domestic, civil, and industrial sectors. With a robust design, it provides reliable performance for water supply from wells or reservoirs, as well as irrigation and garden applications. The unit features an efficient motor cooling system to ensure longevity during continuous operation.

Technical Specifications

Voltage Compatibility

- Three-phase: 380V-415V/50Hz
- Single-phase: 220V-240V/50Hz

Maximum Fluid Temperature	40 °C
Max Sand Content	0.25 %

Compliance and Support

Warranty Period	1 year (according to general sales conditions)
-----------------	--

Applications

Common Use Cases	Water supply, Civil use, Industrial use, Garden irrigation
------------------	--
