

Sintering Ore Car for Metallurgical Projects

The sintering ore car is designed for transporting sintering mixtures in metallurgical facilities. It plays a crucial role in large-scale sintering projects, ensuring efficient material handling.

Product Overview

Industrial Sintering Ore Cars

These heavy-duty sintering ore cars are engineered for large-scale metallurgical operations, providing robust performance in high-capacity sintering plants. Designed to facilitate efficient material transport and processing, these units are essential components in integrated iron and steel manufacturing workflows. Our solutions encompass end-to-end support including engineering design, precision manufacturing, and comprehensive site installation services.

Technical Capabilities

Supported Sintering Plant Capacities

Plant Scale (m ²)	Application Note
450	Large-scale capacity
300	Heavy-duty capacity
265	Standard industrial
132	Mid-range
90	Standard auxiliary
75	Compact capacity

Key Technical Specifications

5 m

Sintering Car Width

Services

Service Scope

- Equipment Procurement
- Design & Engineering
- Manufacturing
- Installation & Erection
- Commissioning

Certifications & Compliance

Industry Standards

Metallurgical Grade, Industrial Heavy Duty, International Engineering Compliance
