

Sintering Pallet Grate Bar

This grate bar is designed for use in sintering pallets. It is constructed from cast metal and features forked ends.

Product Overview

Industrial Sintering Performance

These sintering pallet grate bars are engineered to withstand extreme industrial environments, balancing high airflow requirements with superior mechanical strength. Constructed from high-grade stainless steel, they are specifically designed to endure high thermal loads and rapid temperature cycling. Their advanced wear-resistant technology ensures an extended operational lifespan, even when subjected to continuous abrasion during discharge processes.

Technical Specifications

Material	High-grade stainless steel
Design Features	High Airflow, Wear-Resistant, Thermal Load Optimized, Forked End Design

Operational Capabilities

Key Performance Indicators

1 High

Thermal Load Resistance

1 High

Abrasion Resistance
