

Skid-Mounted Modified Bitumen Production Plant

This skid-mounted plant is designed for efficient and continuous production of modified bitumen. Its compact structure allows for easy transportation and relocation.

Product Overview

High-Performance Modified Bitumen Production

The GS series multi-purpose modified bitumen plant is engineered for the efficient production of high-quality polymer modified bitumen, including SBS, EVA, and PE variants. Designed for versatility, this skid-mounted system is ideal for surface pavement applications on highways, urban roads, bridges, and airports. By utilizing advanced polymer modification, the resulting asphalt offers superior resistance to heavy traffic loads, enhanced UV resistance, and improved service life.

Technical Specifications

Capacity

10 t/h

Min Capacity

20 t/h

Max Capacity

Model Series

GS5 ~ GS20ZS

Compatible Modifiers

SBS, EVA, PE, Crumb Rubber

Key Features

Core Advantages

- Skid-mounted modular design for transportability
- Intelligent automated control system
- Robust steel frame construction
- Integrated heating and mixing system
- Corrosion-resistant piping

Target Applications

Highway Construction • Urban Road Paving • Bridge Decking • Airport Runways
