

Slab Caster for Thin Strip Production

This slab caster is designed for producing thin strips through a continuous casting process. It features a heavy-duty construction with multiple rollers and automated controls.

Product Overview

Continuous Casting Excellence

This slab caster is engineered specifically for the high-precision production of thin metal strips. Its robust, heavy-duty construction ensures operational longevity and reliability in demanding industrial environments. Equipped with integrated rollers and automated control systems, it optimizes the continuous casting process for maximum efficiency.

Technical Specifications

Control Infrastructure

- Integrated roller guides
- Hydraulic control lines
- Pneumatic operational lines

Casting Process

Continuous

System Capabilities

Automated Control, Thin Strip Production, Heavy-Duty Construction
