

Slip-On Pipe Flange

This pipe flange slides over the pipe before welding, making it suitable for low-pressure applications. It is easily installed with a fillet weld on both the inside and outside for secure attachment.

Product Overview

Versatile Connection Solutions

Slip-on flanges are designed to slide over the end of a pipe before being secured with fillet welds on both the inside and outside. These components are primarily utilized in low-pressure applications, offering an easy-to-install and cost-effective connection for pipes, valves, and auxiliary equipment. Their design allows for precise positioning, making them a preferred choice for various industrial piping systems.

Technical Specifications

Available Size Range	1/8" to 48" NB
Pressure Class Ratings	150#, 300#, 400#, 600#, 900#, 1500#, 2500#
Mounting Method	Slip-on (Fillet weld required)
