

Slurry Pump for Sand and Gravel

This slurry pump is designed to deliver slurry containing hard particles, making it suitable for demanding tasks. It features optional hard alloy metal or rubber liner construction for abrasion and corrosion resistance.

Product Overview

Industrial Slurry Handling

This heavy-duty slurry pump is engineered specifically for the demanding requirements of sand and gravel extraction, as well as abrasive mineral processing. It features a robust, high-durability construction designed to withstand harsh industrial environments while maintaining operational efficiency. The integrated high-efficiency impeller ensures minimal wear and consistent performance, making it an ideal solution for dredging and large-scale industrial pumping applications.

Certifications & Standards

Industry Certifications

CE • ISO 9001 • CNAS

Performance Features

Primary Use Cases

- Sand and gravel extraction
- Dredging operations
- Mineral processing
- Industrial abrasive slurry handling

Engineering Design

Design Specifications

Heavy-duty build, High-efficiency impeller, Abrasive resistant, Long-lasting operation
