

Small Engine Cylinder Head

This cylinder head is designed for small engines and features aluminum alloy construction for efficient heat dissipation. Precision-machined surfaces ensure optimal sealing, while multiple cooling fins prevent overheating.

Product Overview

High-Performance Cylinder Head

This high-performance cylinder head is engineered specifically for small engines, offering a robust solution for diverse machinery. Constructed from premium aluminum alloy, it ensures efficient heat dissipation during operation. Precision-machined surfaces guarantee optimal sealing, while integrated cooling fins actively prevent overheating for reliable, long-term performance.

Technical Specifications

Material	Aluminum Alloy
Mounting Holes	4 holes
Cooling System	Integrated cooling fins

Applications

Suitable Applications

- Lawnmowers
- Generators
- Small machinery

Features

Key Features	Heat Dissipation, Precision-Machined, Optimal Sealing, Overheating Prevention
