

Small Gasoline Engine

This small gasoline engine is commonly used in generators, water pumps, and agricultural equipment. It features durable construction, fuel efficiency, and easy maintenance.

Product Overview

Professional Power Solution

The QD168F-1 is a robust and reliable single-cylinder, air-cooled, four-stroke gasoline engine designed for versatile industrial and agricultural applications. Engineered for efficiency and durability, this compact unit is ideal for powering generators, water pumps, and various light machinery. It features a recoil starting system, low-oil shutdown safety technology, and is optimized for ease of maintenance to ensure long-term operational cost-effectiveness.

Technical Specifications

Rated Power

6.5 HP

Power Output

Engine Classification

Single-cylinder, Air-cooled, Four-stroke

Features

Safety Systems

- Low-oil shutdown protection
- Recoil starting system

Maintenance

Service Support

Easy maintenance • Readily available spare parts
