

# Smart Card

Smart cards provide secure access control through identity verification. They are utilized in various security applications for controlled entry.

## Product Overview

### Automotive Climate Control Integration

This advanced smart climate control interface provides seamless in-vehicle temperature management. The unit features precision rotary controls for fan speed, temperature calibration, and airflow distribution. Designed to integrate directly into automotive dashboards, it ensures reliable operation for defrosting, ventilation, and interior air recirculation.

## Technical Specifications

Model ID

M1

Interface Type

Rotary Knobs

Design Features

Climate Control, Defrosting, Air Distribution, Recirculation
