

Smart Card

The smart card is a compact and versatile security device used for access control and data storage. It offers secure identification and authentication for various applications.

Product Overview

Professional Power Solution

This mobile diesel generator set is a self-contained power unit engineered for reliable electricity generation in demanding environments. Designed with mobility in mind, it features a rugged wheeled chassis that allows for easy transport and rapid deployment on construction sites or in remote locations. The integrated control system ensures safe and efficient operation, offering comprehensive monitoring functions for voltage and frequency management.

Technical Features

Key Components

- Robust diesel engine
- High-efficiency alternator
- Rugged wheeled chassis
- Integrated control panel
- Advanced cooling system

Control & Monitoring

Voltage Regulation, Frequency Adjustment, Safety Shutdowns

Application

Suitable Environments

Construction Sites • Emergency Power Backup • Remote Locations
