

Smart Cluster Metering Cabinet for Energy Monitoring

This metering cabinet is designed for smart cluster applications, housing multiple metering modules. It enables comprehensive energy monitoring and management across various circuits or devices within a cluster.

Overview

Smart Cluster Metering Cabinet

The Smart Cluster Metering Cabinet is a high-performance solution designed for professional-grade energy monitoring in complex environments. It enables granular oversight of energy consumption across multiple circuits through its rack-mountable, multi-module architecture. This robust system is specifically engineered to meet the demanding requirements of data centers, industrial facilities, and intelligent building infrastructures.

Technical Specifications

Suitable Applications	Data Centers, Industrial Facilities, Smart Buildings
Mounting Configuration	Rack-mount
Monitoring Functionality	Comprehensive multi-circuit cluster energy monitoring
