Overview

Smart Heat Pump Water Heater

This advanced heat pump water heater offers a versatile and energy-efficient solution for both residential and commercial hot water needs. Featuring multiple operating modes and an enamel-coated water tank with micro-channel external coils, it ensures durability and high thermal performance. The system is designed for flexible installation across various environments, including balconies, bathrooms, and basements, and integrates smart safety features for long-term reliable operation.

Technical Specifications

Operating Conditions

Parameter	Range
Refrigerant	R134a
Ambient Temp	-25°C to 46°C
Test Standard	EN16147

Safety & Features

Protection Systems

- Magnesium rod & Anion anode (Anti-corrosion)
- Intelligent defrost
- PT valve & Safety valve
- High/Low pressure protection
- Electric protection wall
- TOC & TOD backup protection

Advanced Functions

Weekly Disinfection • Weekly Timer • Vocation Function • Child Lock
