

# Smart Home Management Software

This smart home system software provides a centralized platform for managing and controlling various smart devices. The software offers device integration, automation, remote access, and energy monitoring.

## Overview

### Smart Home Management System

Smart Keeper is a centralized software platform designed to manage and control diverse smart devices within a single ecosystem. It enhances residential living by integrating lighting, thermostats, security systems, and appliances into one seamless interface. The platform focuses on improving convenience, energy efficiency, and security for modern living spaces and smart hospitality environments.

## Core Features

### Compatible Smart Devices

- Lighting Systems
- Thermostats
- Security Cameras
- Household Appliances

### System Capabilities

Device Integration, Automation, Remote Access, Energy Monitoring, AI-Powered

## Applications

### Primary Applications

Smart Hotels • Residential Smart Homes
