Overview

Smart Passive Locking Solution

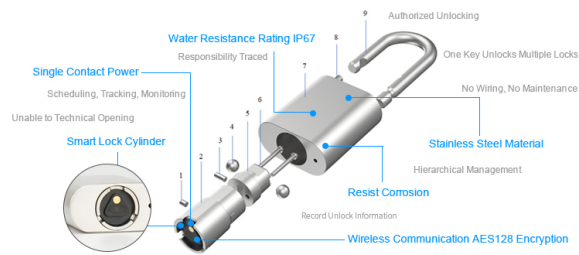

This smart passive lock combines the familiar form factor of a mechanical lock with an embedded high-security smart cylinder for advanced information management. Designed for professional B2B applications, it requires no internal wiring or batteries, drawing power through a single contact point from the electronic key. The system provides comprehensive tracking, scheduling, and monitoring capabilities, ensuring that every access event is recorded and traceable.

Key Features

Core Functionalities

- Authorized Unlocking
- One key unlocks multiple locks
- No wiring or maintenance required
- Hierarchical management support
- Real-time record of unlock information
- Responsibility tracing and tracking
- Protection against technical opening

Technical Specifications

The smart cylinder features IP67 water resistance and stainless steel construction for high durability.

Dimensions (Model WM-2000C-L40)

Feature	Measurement (mm)
Body Width	40
Body Height	46
Body Depth	20
Shackle Diameter	6.5
Shackle Height	27
Shackle Width	21

Dimensions (Model WM-2000C-L35)

Feature	Measurement (mm)
Body Width	35
Body Height	45
Body Depth	20
Shackle Diameter	5
Shackle Height	20

Security & Protection

IP67 Water Resistance, AES128 Encryption, Stainless Steel Material, Corrosion Resistant, Wireless Communication

Applications

Applications Scenarios

Be widely used in logistics supervision, customs smart card, airport logistics coordination management, railway container management supervision application, vehicle management, bulk cargo terminal

Versatile application across logistics, transport, and industrial facilities.

Applications Scenarios

Be used in power cabinets, industrial cabinets, outdoor cabinets, communication network cabinets, power distribution cabinets, display cabinets, money boxes, and item drawers.

Ideal for securing power cabinets, ATMs, and communication network enclosures.

Industrial Applications

- Logistics supervision and transport vehicles
- Customs smart card systems
- Airport and railway container management
- Power and communication network cabinets
- Industrial and outdoor distribution cabinets
- Vending machines and ATM machines
- Warehouse and office security
- Emergency exits and factory access

Management System

Customizable Management Software, Lock size and APP Not only cam lock and padlock but also other all kinds of locks Just be free to tell us what you need

Comprehensive software for tracking access logs and managing multiple lock types.

Customizable Control

The system includes customizable management software that supports various lock types including cam locks and padlocks. It features a map-based interface for location tracking and provides detailed analytics on lock quantity, key quantity, and historical unlocking data.

Logistics

Package

Multiple protection for your goods

Professional packaging ensures the product arrives securely at its destination.

Packaging & Protection

Multiple layers of protection including individual labeled boxes and bulk carton packaging with protective wrapping.
