

Smart Single-Phase Meter with Load Control Unit

This is a smart single-phase meter with an integrated Load Control Unit (LCU). It is designed for remote control and monitoring of electrical circuits in smart metering and energy management applications.

Product Overview

Smart Load Management Solution

This smart single-phase meter features an integrated load control unit, providing advanced electrical load management for modern smart metering systems. Designed for remote control and monitoring, the device includes a built-in relay to ensure efficient circuit regulation. It is a reliable solution for energy management applications requiring high-precision performance.

Technical Specifications

Relay Voltage	250 V
Communication Current	100 mA

Key Features

Integrated Capabilities	Single-Phase, Load Control, Remote Monitoring, PLC Communication
-------------------------	--
