

SMD Rework Station

This rework station is designed for SMD soldering and desoldering. It features adjustable temperature and airflow controls for precise control over the heating process.

Product Overview

Professional SMD Rework Solution

This versatile rework station is engineered for precise surface mount device soldering and desoldering operations. It features integrated, adjustable controls for both temperature and airflow, ensuring the high level of accuracy required for sensitive electronics. With an ESD-safe design, this unit provides a reliable and protected environment for handling complex circuit board components.

Technical Specifications

Safety Standards

ESD Safe

Adjustment Controls

- Adjustable temperature control knob
- Adjustable airflow control knob
- Digital temperature display

Performance Metrics

300 °C

Operational Temperature Base
