

SMT Component Feeder FT8 * 4

This component feeder is designed for SMT pick-and-place machines. It ensures reliable component placement for optimized production.

Product Overview

Precision Component Feeder

This high-performance component feeder is engineered for seamless integration with industrial surface mount technology equipment. It ensures reliable and accurate component placement, which is essential for optimizing production efficiency and minimizing operational downtime. Constructed with high-quality materials and precision mechanics, this unit offers the durability required for demanding high-volume electronics assembly environments.

Technical Details

Model Designation	FT8 * 4
Compatible Series	YG12 Series
Equipment Type	SMT Compound Aircraft Feeder

Quality Standards

Quality Assurance

High Stability • Original Quality • Industrial Grade
