

SMT Equipment Tank Chain

This tank chain is designed for cable management in SMT equipment. It ensures organized cable routing for smooth machine operation.

Product Overview

Yamaha SMT Tank Chain

This original tank chain is a critical component for SMT assembly equipment, specifically engineered for reliable cable management and protection. Designed for durability, this spare part facilitates smooth motion within automated machinery, ensuring the longevity and performance of your production line. It serves as an essential maintenance item for technical repairs.

Compatibility and Identification

Condition

Original • Used

Part Number

KV5-M668J-000
