

# SMT Placement Nozzle 507

This is a JUKI SMT placement nozzle, type 507, designed for use in electronic assembly. It ensures accurate and reliable component placement on various JUKI SMT pick and place machines.

## ADDITIONAL IMAGES

## Product Overview

### High-Precision Placement Nozzle

This high-precision placement nozzle is engineered for reliable component handling in automated surface mount technology (SMT) assembly processes. Designed with a robust, spring-loaded mechanism, it ensures controlled pick-and-place operations and consistent performance. The durable construction provides an extended service life, making it suitable for demanding industrial electronic assembly environments.

## Technical Specifications

### Design Features

- Spring-loaded mechanism
- High-precision alignment
- Vacuum-seal compatible

Model Number	507
Part Number	E36067290A0
Compatible Machine Series	2000 Series

## Product Compatibility

### Available Nozzle Types

Series	Available Models
700 Series	101, 102, 103, 104, 105, 106, 201, 202, 203, 204
2000 Series	500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511
