

Snow Melting Cable for Ramps and Walkways

This snow melting cable features fluoropolymer insulation, a shielded drain wire, and a durable outer sheath. It effectively prevents snow and ice accumulation on surfaces during winter.

Product Overview

Professional Snow Melting Solution

This high-performance heating cable is engineered to prevent snow and ice accumulation on outdoor surfaces, ensuring safety and accessibility during winter months. Designed for versatility, the system features a robust, anti-UV fluoropolymer insulated structure suitable for integration into concrete, asphalt, or paver installations. Its constant wattage design and single-end connection allow for quick and easy installation in both residential and commercial environments.

Technical Specifications

Voltage Ratings

- 110-120V
- 208-240V

Wattage per Meter	30 W/m
Cable Diameter	6 mm
Design Features	Fluoropolymer Insulation, Alu-foil Shielded, Anti-UV, Single-end Connection

Compliance and Warranty

Regulatory Approvals

CE • UKCA • EAC

Manufacturer Warranty

10 years

Warranty Period
